Unfortunately, critical thinking *won't* necessarily tell you whether you should get a dog or who to support for President, or whether there is global warming or why your car won't start. It can, however, help you spot a bad reason for getting a dog or voting for someone, or for thinking there is or isn't global warming or for this or that explanation of why your car won't start. Please notice we say it can do that, not that it *will*.In the end, reasoning may yield to self- interest, wishful thinking, desire for acceptance, or other temptations; and we may find it difficult to free our thinking from various cognitive biases, distortions, or blind spots. Just remember, reasoning that doesn't measure up to the standards set forth in this book is not worthy of acceptance. Reading the book thoughtfully, doing the exercises, and applying what you learn will be a good first step toward avoiding these problems.

To get good at tennis, golf, playing a musical instrument, or most other skills, you have to practice, and practice some more. It's the same way with critical thinking, and that's why we provide so many exercises. For some exercises, there is no such thing as only one correct answer, just as there is no such thing as only one correct way to serve a tennis ball. Some answers, however—just like tennis serves—are better than others and that is where your instructor comes in. In many exercises, answers you give that are different from your instructor's are not necessarily incorrect. Still, your instructor's answers will be well thought out, reliable, and worth your attention. We recommend taking advantage of his or her experience to improve your ability to think critically.

Questions:

i) How is critical thinking different?

ii) How can critical thinking help us?

iii) What is critical thinking compared with?

iv) Give a suitable title to the passage?

b) Read the following passage carefully and make notes on it. **[10]**

Vagueness plays a very important role in much that we do. In the law, for example. how we deal with vagueness is crucial. Whether the word "torture" applies to various types of interrogation techniques, especially including "waterboarding," for example, has been a serious issue for several years. Many former officials have claimed that these techniques did not count as torture, but many others have disagreed. (Some, who subjected themselves to the procedure, have disagreed rather violently.) Possibly more relevant to us and to you personally, whether a bit of driving is "reckless" or not may determine whether you pay a small fine or a large one—or even go to jail. Consider, too, the speed limits we are asked to observe on the highways. Ideally, the offense in question would be something like "driving too fast for the circumstances" rather

Q5) a) Write a précis of the following passage. **[10]**

There are different kinds of thinking and other approaches to some of the mental challenges we face. Let's start with convergent and divergent thinking. Convergent thinking is our normal state. When we hear a suggestion, our instincts are to examine it, criticize it and analyse its consequences with particular emphasis on what might be wrong with it. We are trained at school and university to summarize, scrutinize and evaluate the works of authors, historians and scientists. It is easy and natural for us to focus in on a notion and examine it critically from various view points. We bring our own assumptions and mindset to bear and put the new idea into the framework of the world as we see it.

Divergent thinking, on the other hand, involves moving away from the core subject in a spread of directions. When we use divergent thinking we can generate all sorts of ideas that are not obviously connected with the original challenge or concept. We stretch the boundaries and let our imagination generate many different possibilities — including wild or unsound ideas. It is the counterpoint to convergent thinking, where we focus sharply on one target and narrow down our options to arrive at a chosen solution.

Convergent thinking allows us to use our knowledge to examine concepts and see where they fit. Unfortunately our natural tendency is to reject ideas if they are not aligned with our existing knowledge and belief systems. Divergent thinking involves considering all sorts of points of view-including the unconventional, the unfashionable, the ridiculous and the outlandish. It is an essential skill, which goes unpractised for many. There are times when we need the precision of convergent thinking and there are times when it is overly restrictive. The two main phases of a brainstorm meeting are good examples of how both methods can be employed in harmony.
